

WET KITCHEN

This part of the diet kitchen is where all the food is prepared. Two computer screens show all the recipes that need to be prepared that day. The recipes change every day because the majority of animals prefer variation! But also for health reasons, most animals benefit from a varied diet. We humans would also not like to eat sprouts every day!

FOODSTUFFS THAT ARE USED INCLUDE:

- Vegetables
- Seeds
- Eggs
- Prey, big and small
- Fruit
- Compound feed
- Fish
- Herbaceous vegetation
- Nuts
- Supplements
- Oil
- Pulses
- Meat
- Root vegetables
- Cereals
- Living insects
- Worms and larvae

AFTER PREPARING THE FOOD, THE WORK IS NOT YET FINISHED:

- The kitchen is thoroughly cleaned
- Stocks are supplemented
- Food is removed from the freezers so that it can defrost
- New provisions are ordered
- Delivered products are stored
- Everything is put ready for the following day!
