## - BACICSTAGIE -

## SOLAR PANELS AND WATER BASINS

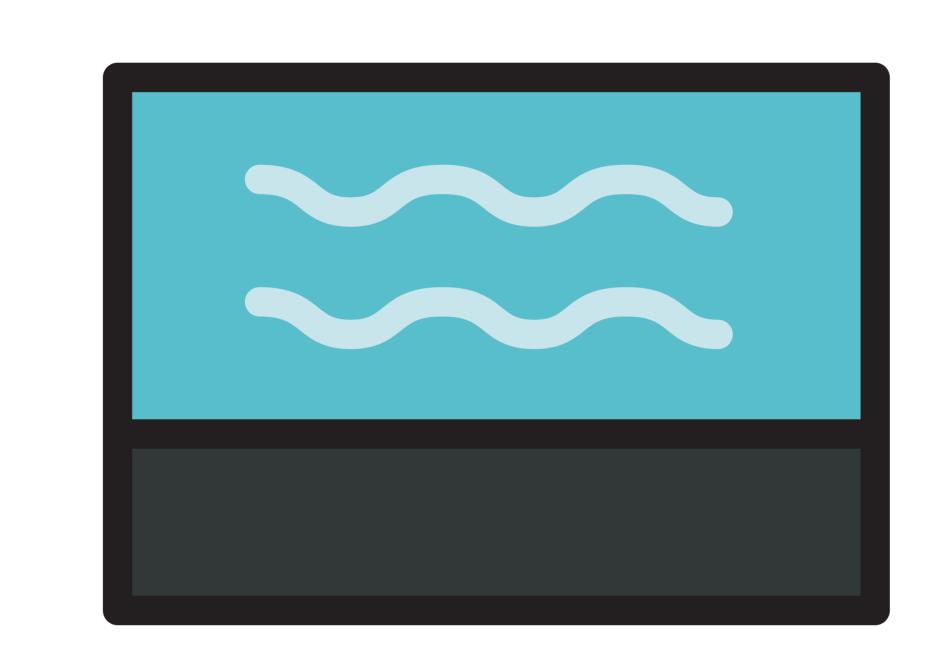

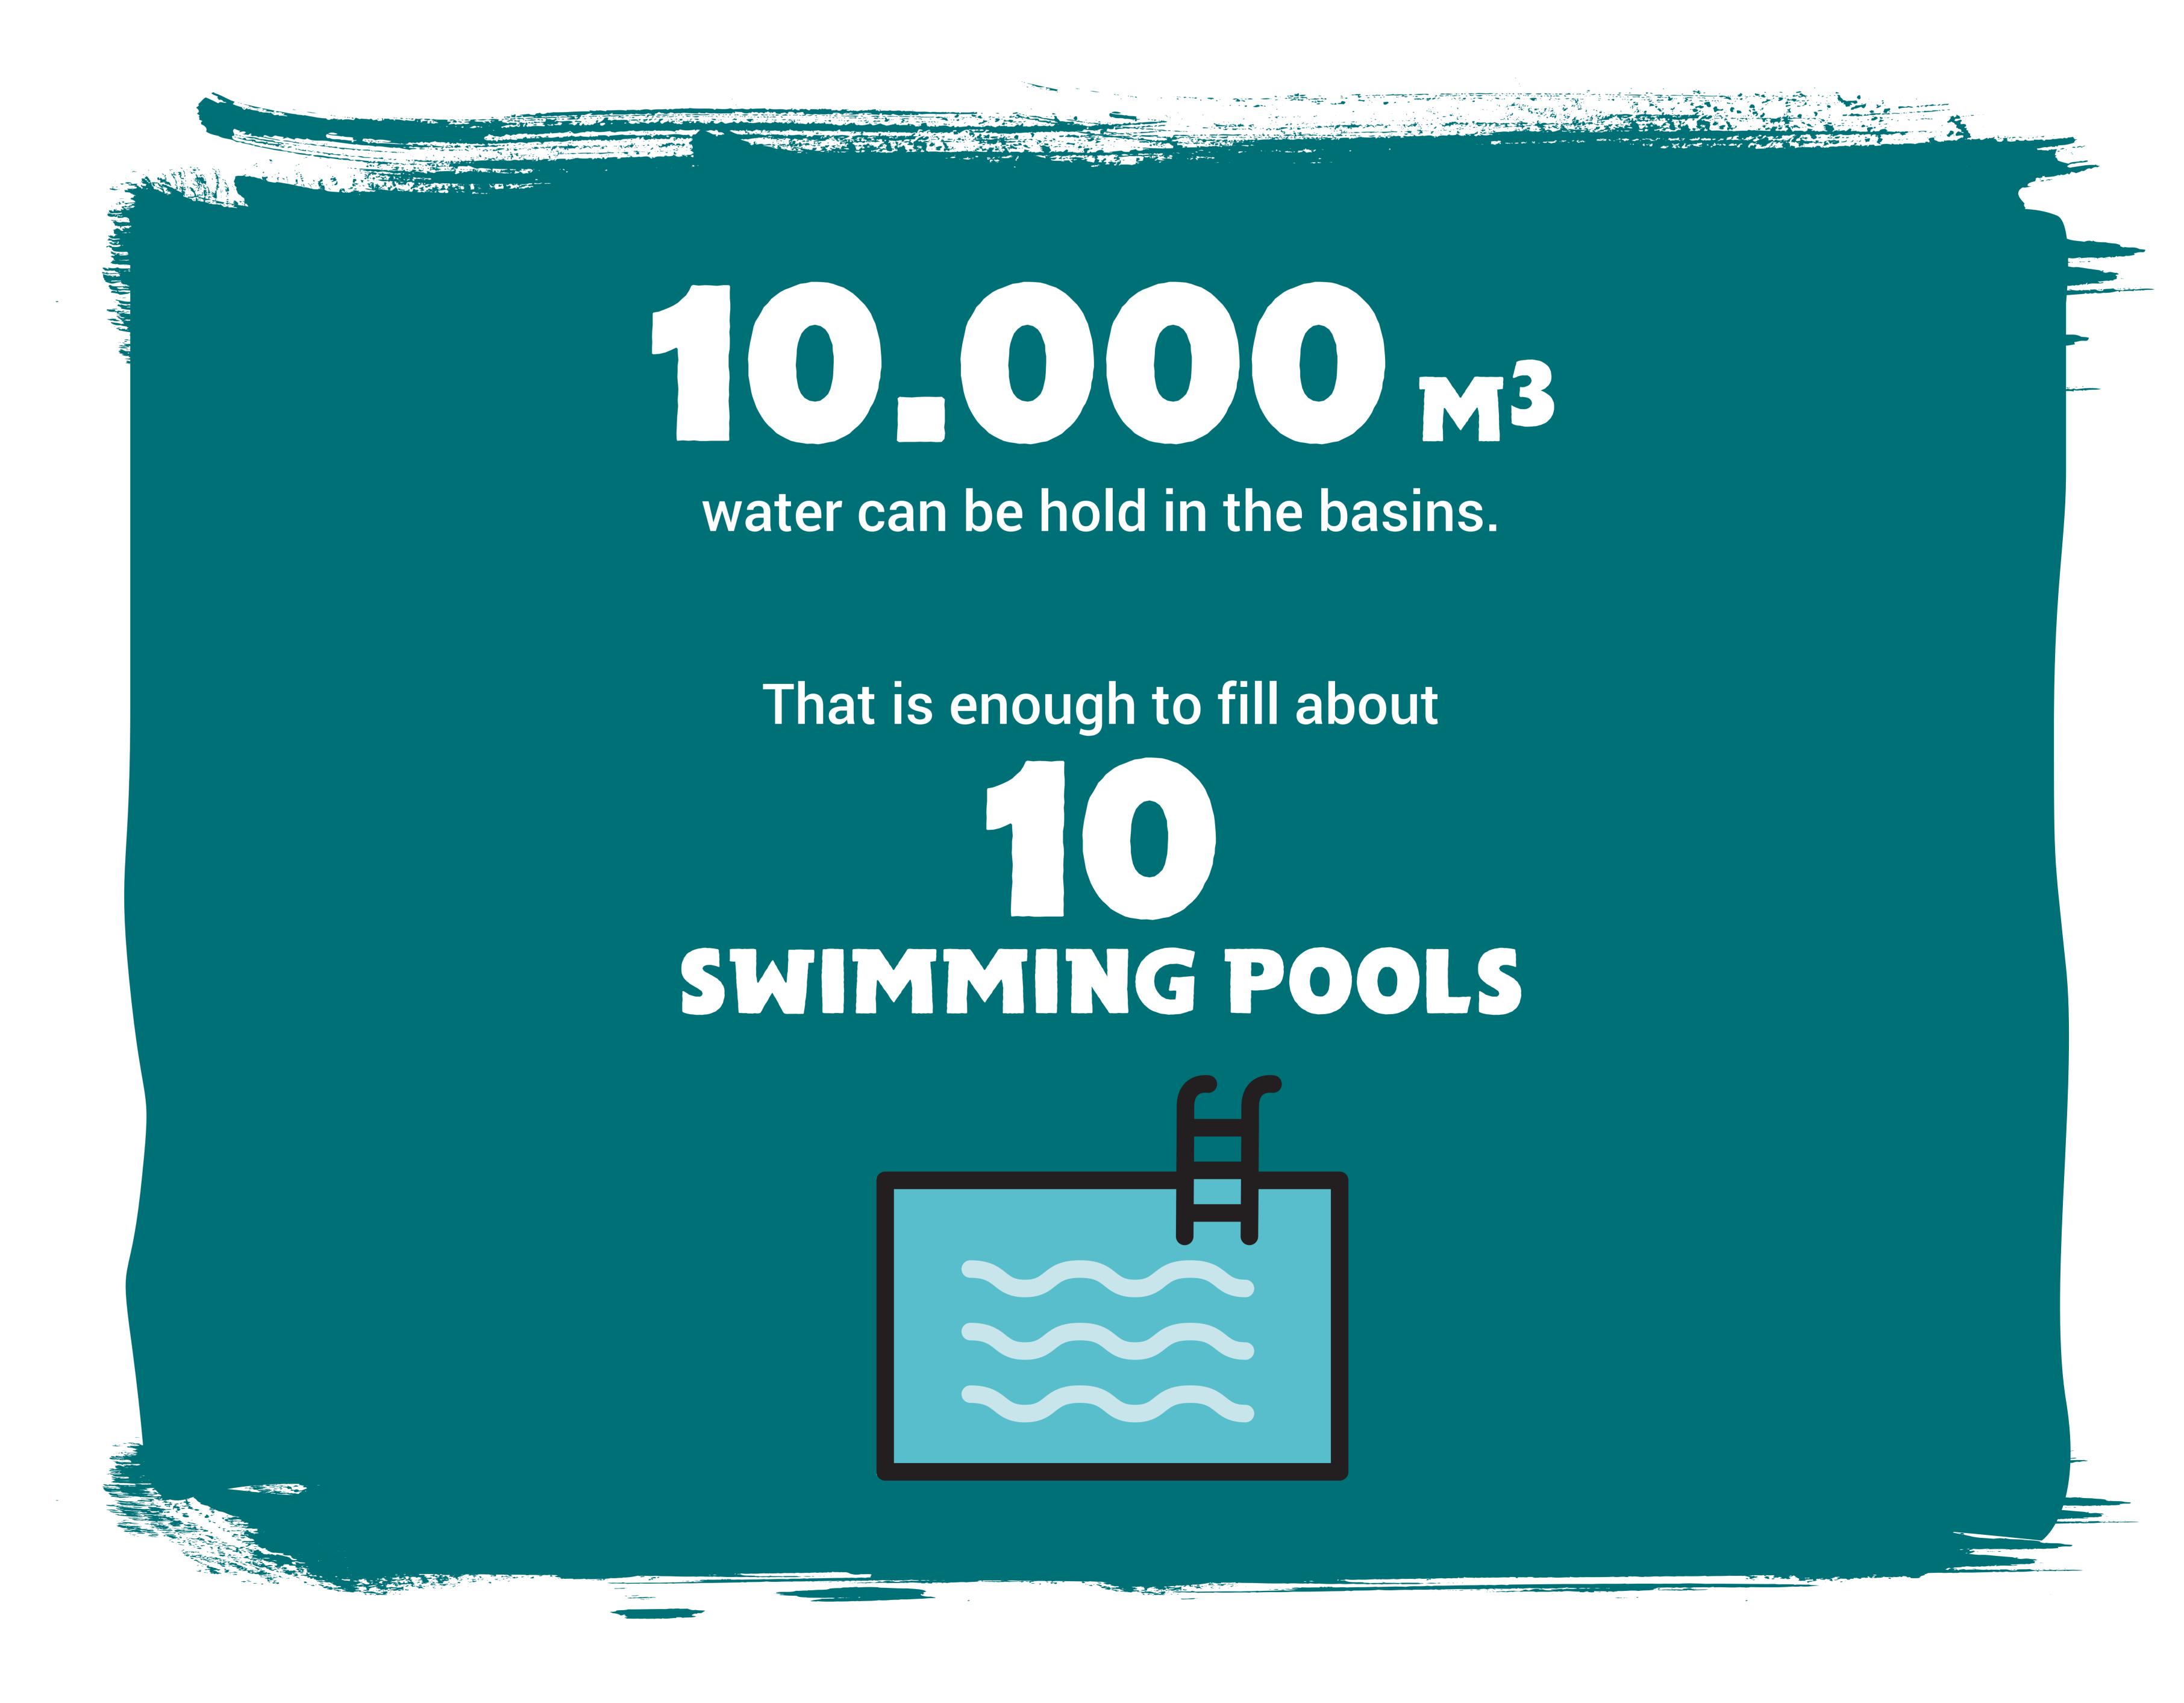

## WILDLANDS IS ECONOMICAL WITH ENERGY

- Many of the vehicles used in WILDLANDS for transport are electric.
- All of the equipment used in the catering facilities in WILDLANDS is electric.
- LED lighting is used everywhere except in Animazia. The light switches are also equipped with sensors, so the lights turn off automatically.
- All indoor animal enclosures are naturally ventilated and get plenty of daylight every day. This significantly reduces the need to use artificial light during the day.

## WATER COLLECTION

WILDLANDS employs two large water basins to collect rainwater.
Rainwater from the roofs and drains is collected in the basins.
The quality of the water in the basins for the animals is constantly monitored. If the water becomes contaminated, it can be refreshed by using the collected water in the water basins.

The water from the basins is purified in the Water Factory. If you would like to find out more about this, continue on your route.
